in Landscape Transformation

WE TRANSFORM IT

# THE SITUATION.

Every day you are faced with this challenge: your company is constantly evolving and adapting dynamically to altered market conditions. However, this process does not take place without affecting internal structures. National and international competition as well as increasing globalization requires regular processes to adapt your company to the markets and their conditions.

## THERE CAN BE VARIOUS CATALYSTS FOR THIS:

- You want to bundle your classic finance and controlling modules in S/4HANA
- You are modernizing or optimizing your existing IT system landscape
- You are performing a release upgrade
- You are buying or selling parts of a company, business units or entire companies
- You are restructuring your company or your organization
- You are eliminating redundancies
- You want to cut costs
- You plan to increase your IT performance
- You aim to reduce your operating, maintenance and project outlay
- You need to adapt your company to comply with regulatory requirements or conditions

Changes within the company inevitably also affect the IT system landscape. Thus, for example, many managers are faced with the complex task of having to merge multiple ERP systems as a result of company mergers or separating certain data-sets from an IT system landscape due to the sale of parts of the company. These are both examples of processes that must be performed without any errors or losses.

Ongoing technical advances and the associated regular release updates, in particular conversion of your systems to S/4HANA, also make it necessary for you to adapt your systems. Here, one important factor is how quickly such transformations can be carried out during ongoing operation. The system downtime needs to be kept as short as possible, as the ERP system is essential to maintain the company's business processes. In addition, the project managers have to perform the usually complex and sensitive transformations in time and budget while also complying with all security regulations. After all, time, money and security play a significant role in all companies.

SAP consolidation projects are multifaceted and generally require a substantial amount of effort. Here, reliable solutions are required that ensure smooth and secure management of FI and CO data. With software support and automation, this process can be noticeably simplified and implemented with optimum results.

## OUR SOLUTION.

**bFinanceManagement** makes loss-free migration of financial data easier and more efficient than ever before. Whether you are a global corporate group or a medium-sized company, **bancon-it's** typical combination of expert service and software developed with practical use in mind, combined with the latest S/4HANA technologies, ensures that all your financial data is transferred quickly and without errors. Our tool, which was developed entirely within the standard SAP software, has already proven this reliability in numerous projects. Naturally, all processes initiated using the program also run within the standard SAP software. It makes no difference whether it is receivables, liabilities, profit and loss accounts or balance sheet accounts, whether time-period-related or characteristic-related data: all your information can be processed correctly in accordance with your specifications. With **bFinanceManagement**, these processes are executed fully automatically, via a direct route, at any time and without any expensive loss of time. This can be done both within SAP systems and from other ERP systems.

### Tailored software

Our experts tailor the functionality of the software used precisely to your requirements, while providing the greatest possible level of automation. Together with these experts, you select only those modules of our **bFinanceManagement** that meet the requirements of your transformation project and allow you to transfer your data without any problems. With our high-performance tool, you can analyze the specific issues and requirements at your company in detail, define relevant service requirements and optimally adapt the programs used. Manual programming is almost entirely eliminated.

# OUR SERVICE CONCEPT.

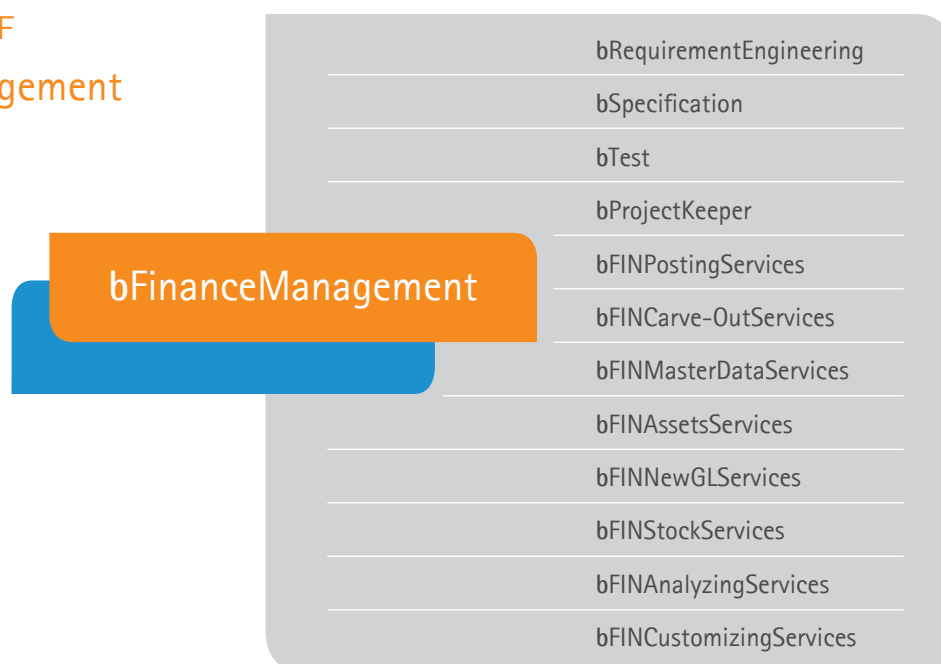

In addition to tailored software, you benefit from our holistic service concept. Throughout the entire transformation process, we are on hand to help you with our proven expertise. We will support your project proficiently and reliably and our **bProjectKeepers** will ensure an efficient procedure. With our vast experience and extensive knowledge, we guarantee you professional project and quality management, resulting in adherence to schedule and budget requirements. Furthermore, our professional test management ensures that your project runs smoothly: all processes are simulated using your entire data inventory.

## What makes our **bFinanceManagement** so special?

- Immediately before the transformation, the tool runs a simulation on the live system. This reduces the error rate to almost 0% and maximizes the quality of the system when you go live.
- Depending on the project, you may be able to perform the transformation within the live system while it is running and thus entirely without downtime (=zero downtime). Continuous operation is not interrupted! This is a convenient solution with significant time and cost savings.

**Place your trust in a highly flexible solution that we have developed 100% within the standard SAP architecture and that makes transferring and migrating your FI and CO data easier than ever before.**

## COMPONENTS OF **bFinanceManagement**

## YOUR ADVANTAGES AT A GLANCE.

### **Efficient transformation,**

depending on the project with genuine zero downtime and accordingly no restrictions in live operation

### **Risk-free transformation**

thanks to professional test management with simulation on the live system and an error rate of almost 0%

## **bFinanceManagement**

### **An excellent combination**

of modular software that can be adjusted to your requirements and end-to-end service

### **Fully automated processes**

within SAP or from other ERP systems

# OUR PROFILE.

bancon-it has been your ideal SAP expert for professional transformation services, software consulting, development and implementation for more than 15 years. Our products, which are developed 100% within the standard SAP architecture, come into play wherever efficiency, streamlined processes and viable, scalable solutions are required. bancon-it experts combine business skills with technical expertise and well-founded industry knowledge – your guarantee for projects realized in line with deadlines and budgets. Whether they are required for project management or collaboration in projects, filling staff positions or neutral quality management, our specialists fit perfectly into your project structure and culture. For projects that are entirely outsourced to us, we keep you up to date on all processes at all times. Transparency is one of our strengths. Our employees from Walldorf, Germany and Cape Town, South Africa are available to you for deployment worldwide.

## OUR EXPERTISE

As specialists who have been around since the very beginning, we have well-founded expertise in developing or optimizing system landscapes, automation, migration and archiving as well as in SAP architecture-compliant application development – expert knowledge that pays off.

## OUR PROMISE

We provide expert consulting and professional support for your project from the very first consultation to problem-free implementation – with consistent quality management throughout.

## OUR GOAL

We develop efficient, tailor-made solutions to optimize your business processes, adhering to deadlines and budgets in the process. Benefit from many years of experience, excellent organization and well-coordinated teams who optimize your system landscape, and rely on products and services with a lowercase “b” – our code for best-in-class solutions.
